# Sell on Amazon with k-commerce

k-commerce's Amazon Marketplace Integration connects your Amazon and Amazon Business Marketplaces to your Enterprise Resource Planning (ERP) platform. The benefits of integrating your ERP platform to Amazon Marketplace include:

## Expanding your reach

Amazon is a well-established channel with a huge customer base that you can take advantage of.

## Optimizing sales

Moving towards unified commerce with a solution like k-commerce will create efficiency and optimize exposure.

## Minimize overhead

Consolidate order channels into one single source.

# How does it work?

It updates the product information from your ERP platform (pricing, inventory, condition, fulfillment lead time) to your Amazon Marketplace store.

It creates orders placed on Amazon directly in your ERP platform. Let us automate the process so that all your orders are in one place and you can tend to them in one place.

When updates are made to orders in your ERP platform (tracking number, order status), **the order will be updated on Amazon.**

**Supports both** Fulfilled by Merchant (FBM) and Fulfilled by Amazon (FBA).

# Make selling on Amazon easy

Don't waste time doing all that extra manual work to get those orders from Amazon into your ERP platform. That is time that could be spent building your business! k-commerce not only makes integration of your ERP platform to your ecommerce site easy – integrating to Amazon Marketplace is just as easy.
